

Evoke 12 Mission Detailed Summary revision bf v2.xlsx

Mission #	Week	Mission/Activity Title	Arc	Superpower	Primary Evoke Skill	Secondary Evoke Skill	PBL Description	PFL Domain	Evoke Mission	Evidence
1	1	Follow the Flow	Explore	Empathetic Changemaker	Empathy	Research & Analysis	Students investigate a pressing and relevant challenge related to water access, property ownership, or financial exclusion. They explore the forces and systems shaping the issue and examine how different members of the community experience its	Philanthropy	Step into the challenge from the perspectives of others. Talk with at least two stakeholders, listen for emotion, perspective, and patterns, ask thoughtful questions before jumping to conclusions, compare what you learned, challenge one assumption, and name the community challenge clearly.	Notes or reflections from at least two stakeholder perspectives, including one assumption challenged; and a Challenge Statement identifying the community issue and financial realities shaping it.
2	1	Your Prosperity Origin Story	Explore	Systems Thinker	Critical Reflection	Communication	Students connect the pressing challenge they defined in Mission 1 to their own lived experience, values, and aspirations. They examine why the issue matters to them personally and how it may shape the future they want to build, including the kind of	Goal Setting	Bring the challenge closer by tracing how it connects to your life, assumptions, values, and future direction. Reflect on why the issue matters to you and what kind of role or pathway it may call you toward.	Either a Prosperity Origin Story or an EVOKE Avatar; and a future direction that relates to the challenge, such as a career, project, hobby, or personal interest.
3	2	Dream Beyond the Obvious	Imagine	Creative Visionary	Imagination	Teamwork	Teams generate a wide range of imaginative ideas that could address the challenge they identified in Explore. They push beyond obvious solutions and explore multiple possibilities before identifying promising directions to imagine	Philanthropy	Create a collaborative Dream Map by generating many ideas, including wild, practical, and impossible ones. Find patterns and idea clusters, then identify 2–3 promising directions that feel bold, surprising, or capable of creating meaningful change.	A collaborative Dream Map showing brainstorming and emerging idea clusters; and 2–3 promising solution directions the team wants to explore further.
4	2	2035: If We Get This Right	Imagine	Creative Visionary	Vision	Leadership	Teams choose one promising idea from Mission 3 and imagine the future it could help create. They define what success would look like, establish a shared north star, and bring that future vision to life through a creative expression.	Goal Setting	Choose one promising solution and imagine the year 2035 if the idea worked. Picture who is experiencing change, what feels different, what problem has become smaller or disappeared, and what success looks like. Define a North Star Statement and bring the future to life creatively.	A 1–2 sentence North Star Statement that defines the change the team wants to create and what success would look like; and a short creative expression of the 2035 vision.
5	3	What Would It Take—for Real?	Imagine	Systems Thinker	Research & Analysis	Problem Solving	Teams begin turning their vision into something more concrete by researching and analyzing what is required to get started. They look at key resources and likely costs, identify what is essential versus what can wait, and create a light starter budget	Budgeting	Identify what the solution would need to get started, including people, time, partnerships, space, tools, and money. Use evidence to test assumptions, research real examples and costs, sort what is essential from what can wait, and build a starter budget.	A simple starter budget showing prioritized expenditures, rough cost estimates, and brief notes on how the team estimated those costs; and a short research snapshot showing how the team gathered information to make
6	3	What If We Actually Did This?	Imagine	Creative Visionary	Creativity	Critical Reflection	Teams complete their budget by thinking creatively about what it would actually take to move their idea forward. They stress test their plan and identify possible sources of income that could help their solution launch, continue, or grow. Through	Budgeting	Stress test the starter budget, look for missing or unrealistic assumptions, consider ways to start smaller or simplify, brainstorm the resource and income side of the budget, and update the budget based on what now feels realistic.	An updated budget showing revised expenditures, changed assumptions, and what now feels most realistic; and a short list of possible sources of income or revenue that could help the solution launch, continue, or
7	4	Bring It to Life	Act	Systems Thinker	Problem Solving	Imagination	Teams begin turning their solution into a concrete prototype over two missions. In this first mission, they plan and organize their first steps, simplify the concept into a workable form, and create an initial version that shows how their solution fits	Goal Setting	Decide what part of the idea needs to exist first, break a complex idea into a manageable first build, and create a prototype that is clear enough to show how the solution could work. Pause to identify what is working, what is unfinished, and what would make it stronger.	The first version of a concrete prototype showing how the solution could work; and a 1–2 sentence explanation of what the team chose to prototype first and why.
8	4	Strengthen the Vision	Act	Empathetic Changemaker	Leadership	Vision	Teams strengthen their first prototype by reconnecting it to their larger vision, identifying what needs improvement, and working together to create a stronger version ready for community testing. Building within real-world constraints and their	Budgeting	Revisit the original vision and budget, decide what matters most, and strengthen the prototype so it more clearly reflects the change the team wants to create. Think about alternatives, tradeoffs, and consequences as the team decides what should stay, change, move forward now, or wait.	A revised prototype ready for testing that clearly communicates the solution; and a brief explanation of one important choice or tradeoff the team made, including what they changed, kept, simplified, or set

9	5	Put It in the World	Act	Empathetic Changemaker	Courage	Empathy	Teams test their prototype with people beyond their immediate team to understand how others experience the solution. They listen for what makes sense, what feels confusing, what sparks interest, and what raises concerns. By gathering real-world	Investing	Put the prototype in front of people beyond the team, ask for honest reactions, listen without defending, compare what people understood or questioned, and decide which feedback matters most before moving forward.	Documented feedback from prototype testing, such as notes, quotes, or observations; and a short team decision about the most important change or insight that will shape what happens next.
10	5	Worth Backing	Act	Deep Collaborator	Teamwork	Relationship Management	Teams make three strategic decisions that turn their solution into something others could realistically back. Working together, they align around the same solution, define what success looks like, and decide what kind of opportunity, risk, and	Investing	Get aligned as a team by laying out the challenge, vision, budget, prototype, and testing insights. Define 2–3 measurable signs of success, use the Venture Spectrum to decide whether the solution is a Safe Bet, Balanced Bet, or Moonshot, and complete a one-sentence investment case.	2–3 measurable indicators of success; where the venture fits on the Venture Spectrum; and a one-sentence investment case.
11	6	Craft Your Pitch	Communicate	Deep Collaborator	Communication	Creativity	Teams transform their strategic decisions into a compelling elevator pitch. Building on their definition of success, risk tolerance and investment case from Mission 10, they decide what kind of backing to seek, assign roles, and creatively	Investing	Complete the Venture Points Challenge, decide how many Venture Points to offer to attract support, craft an elevator pitch that explains the problem, solution, prototype, investment case, impact or return, and support needed, then design how the team will deliver the pitch.	A completed elevator pitch; and the team's Venture Points offer.
12	6	The Evokation	Communicate	Deep Collaborator	Relationship Management	Courage	Teams publicly present their Evoke journey	Investing	Deliver the live Evokation by bringing together the challenge, innovation, prototype, elevator pitch, Venture Points offer, and future vision. Engage the audience by reading the room, including them in the conversation, listening carefully, respecting different perspectives, and looking for common ground.	A live Evokation presentation, including a respectful audience Q&A exchange, the challenge identified, innovation and prototype, elevator pitch, Venture Points offer/investment case, and vision for the future.
